

General Achievement Trends — North Dakota

K-12 enrollment — 94,057

The raw data used to develop these state profiles, including data for additional grade levels and years before 2002, can be found on the CEP Web site at www.cep-dc.org. Click on the link on the left for No Child Left Behind. In the Document Library, look for the most recent report on student achievement since 2002. Below the name of the report, click on the link for View State Profiles and Worksheets. Scroll down the page, and click on the Worksheet links for any state.

Overall Achievement — Key Findings

General results

The tables in this profile present state test results in reading and math at three achievement levels (basic, proficient, and advanced) and at one grade each at the elementary, middle, and high school levels. These data are more complete than the percentage of students scoring proficient that is the main indicator used to determine adequate yearly progress under the No Child Left Behind Act.

In general, North Dakota had mixed results at the **basic**, **proficient**, and **advanced** achievement levels.

Specific results

- Between 2005 and 2008, the percentage of students scoring at the **basic** level and above in reading declined slightly at the elementary grade analyzed, increased slightly at the middle school grade analyzed, and decreased at a moderate-to-large rate at the high school level. In math, there was a slight decline in the percentage basic and above at the elementary grade analyzed but a slight increase at the middle and high school grades.
- In reading, the percentage of students reaching or exceeding the **proficient** level rose slightly at the elementary and middle grades analyzed but dropped at a moderate-to-large rate at the high school level. In math, the percentage proficient decreased slightly at the elementary level, increased at a moderate-to-large rate at the middle school level, and rose slightly at the high school level.
- The percentage of students reaching the **advanced** level in reading increased at a moderate-to-large rate at the elementary grade analyzed, rose slightly in the middle school grade analyzed, and decreased at a moderate-to-large rate at the high school level. In math, the percentage of advanced students went down slightly at the elementary level, went up at a moderate-to-large rate at the middle school level, and declined at a moderate-to-large rate at the high school level.

Data Limitations

| | |
|--|-------------------|
| Years of comparable percentage proficient data | 2005 through 2008 |
| Years of data needed to compute effect sizes | 2005 through 2008 |

Test Characteristics

The characteristics highlighted below are for the state reading and mathematics tests used for accountability under the No Child Left Behind Act (NCLB).

| | |
|--|--|
| Test(s) used for NCLB accountability | North Dakota State Assessment (NDSA) North Dakota Alternate Assessment (NDAA) |
| Grades tested for NCLB accountability | 3–8, 11 |
| State labels for achievement levels | ND uses four achievement levels: Novice, Partially Proficient, Proficient, and Advanced. For our analyses we treated Partially Proficient as Basic, Proficient as Proficient, and Advanced as Advanced. |
| High school NCLB test also used as an exit exam? | No |
| First year test used | 2001–02 |
| Time of test administration | Fall |
| Major changes in testing system (2002–present) | 2001–02: The NDSA replaced the TerraNova as the state assessment, with the goal of eventually assessing grades 3–8 and 11. From 2001–02 through 2003–04, grades 4, 8, and 12 were tested. 2004–05: Tests administered in grades 3–8 and 11. Spring 2005: New standards set, new cut scores established |

Overall Achievement — Percentages Proficient

Figure ND-1. Percentage of Students Scoring at the Proficient Level and Above in Reading

Table ND-1. Percentage of Students Scoring at the Proficient Level and Above in Reading

| Grade Level | Reporting Year | | | | | | | | | Pre-NCLB Average Yearly Percentage Point Gain 1999-2002 ¹ | Post-NCLB Average Yearly Percentage Point Gain 2002-2008 ¹ | |
|-----------------|----------------|------|------|------|------------|------------|------------|------------|------|---|--|-------------|
| | 1999 | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | | |
| Grade 3 | | | | | 78% | 81% | 81% | 76% | | NA | | -0.6 |
| Grade 4 | | | | | 76% | 77% | 81% | 76% | | NA | | 0.1 |
| Grade 5 | | | | | 75% | 72% | 75% | 68% | | NA | | -2.3 |
| Grade 6 | | | | | 75% | 71% | 78% | 73% | | NA | | -0.7 |
| Grade 7 | | | | | 74% | 76% | 81% | 78% | | NA | | 1.4 |
| Grade 8 | | | | | 72% | 72% | 76% | 74% | | NA | | 0.7 |
| Grade 11 | | | | | 70% | 73% | 72% | 65% | | NA | | -1.7 |

Table reads: The percentage of 3rd graders who scored at the proficient level and above on the state reading test decreased from 78% in 2005 to 76% in 2008. The average yearly loss in the percentage proficient in grade 3 reading was 0.6 percentage points per year after NCLB was enacted.

¹Averages are subject to rounding error.

Figure ND-2. Percentage of Students Scoring at the Proficient Level and Above in Mathematics

Table ND-2. Percentage of Students Scoring at the Proficient Level and Above in Mathematics

| Grade Level | Reporting Year | | | | | | | | | Pre-NCLB Average Yearly Percentage Point Gain 1999-2002 ¹ | Post-NCLB Average Yearly Percentage Point Gain 2002-2008 ¹ | |
|-----------------|----------------|------|------|------|------|------|------------|------------|------------|---|--|-------------|
| | 1999 | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | | |
| Grade 3 | | | | | | | 83% | 86% | 86% | 87% | NA | 1.1 |
| Grade 4 | | | | | | | 79% | 80% | 80% | 78% | NA | -0.5 |
| Grade 5 | | | | | | | 74% | 78% | 81% | 80% | NA | 1.9 |
| Grade 6 | | | | | | | 70% | 76% | 82% | 81% | NA | 3.6 |
| Grade 7 | | | | | | | 67% | 68% | 77% | 78% | NA | 3.8 |
| Grade 8 | | | | | | | 65% | 67% | 67% | 70% | NA | 1.7 |
| Grade 11 | | | | | | | 55% | 57% | 57% | 56% | NA | 0.2 |

Table reads: The percentage of 3rd graders who scored at the proficient level and above on the state math test increased from 83% in 2005 to 87% in 2008. The average yearly gain in the percentage proficient in grade 3 math was 1.1 percentage points per year after NCLB was enacted.

¹Averages are subject to rounding error.

Overall Achievement — Percentages Advanced, Proficient, and Basic

How to read figures 3 and 4 and tables 3 and 4

The stacked bars in figures 3 and 4 show the percentages of students scoring at the basic, proficient, and advanced levels on the state tests used for NCLB accountability. The following information may be helpful in interpreting the figures:

- The percentage proficient and above—the benchmark used to determine adequate yearly progress under NCLB—is the sum of the middle and top segments of the bars (percentage proficient plus percentage advanced).
- The percentage basic and above is the sum of all three segments of the bars (percentage basic plus percentage proficient plus percentage advanced).
- The sums that result from adding the segments of the bars in these ways correspond with the percentages proficient and above, and basic and above, shown in tables 3 and 4. In a few instances, however, the sums in the figures may differ from those in the tables by a percentage point due to rounding.
- The bars do not total 100% because students who score *below* the basic level are not displayed.
- By looking at the percentages in each segment of the bars, one can see how achievement trends at the three levels interact. Ideally, one would want to see increases at all three levels, as more students move from below basic to basic achievement, from basic to proficient, and from proficient to advanced. But other scenarios may also be illuminating. For example, gains may occur in the percentage basic even if the percentage proficient and above has stayed the same, suggesting that progress has been made in moving students from the below basic to the basic level. Or, if the percentage proficient has grown while the percentages basic and advanced have shrunk, this suggests that educators may have focused a great deal of attention on moving students from the basic to proficient levels.
- Some states use different labels for their achievement levels instead of basic, proficient, and advanced. The specific state labels are listed in the Test Characteristics section at the beginning of this profile.

Figure ND-3. Percentages of Students Scoring at the Advanced, Proficient, and Basic Levels in Reading

Table ND-3. Percentages of Students Scoring at the Advanced, Proficient and Above, and Basic and Above Levels in Reading

| Achievement Level | Reporting Year | | | | | | | Average Yearly Percentage Point Gain ¹ |
|----------------------|----------------|------|------|------|------|------|------|---|
| | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | |
| Grade 4 | | | | | | | | |
| Advanced | | | | 18% | 21% | 22% | 23% | 1.6 |
| Proficient and Above | | | | 76% | 77% | 81% | 76% | 0.1 |
| Basic and Above | | | | 94% | 95% | 95% | 93% | -0.2 |
| Grade 8 | | | | | | | | |
| Advanced | | | | 16% | 12% | 17% | 17% | 0.4 |
| Proficient and Above | | | | 72% | 72% | 76% | 74% | 0.7 |
| Basic and Above | | | | 92% | 92% | 93% | 92% | 0.2 |
| Grade 11 | | | | | | | | |
| Advanced | | | | 18% | 14% | 19% | 13% | -1.6 |
| Proficient and Above | | | | 70% | 73% | 72% | 65% | -1.7 |
| Basic and Above | | | | 91% | 93% | 91% | 88% | -1.2 |

Table reads: The percentage of 4th graders who scored at the advanced level on their state reading test increased from 18% in 2005 to 23% in 2008. During this period, the average yearly gain in the percentage advanced was 1.6 percentage points per year in grade 4 reading.

¹Averages are subject to rounding error.

Figure ND-4. Percentages of Students Scoring at the Advanced, Proficient, and Basic Levels in Mathematics

Table ND-4. Percentages of Students Scoring at the Advanced, Proficient and Above, and Basic and Above Levels in Mathematics

| Achievement Level | Reporting Year | | | | | | | Average Yearly Percentage Point Gain ¹ |
|----------------------|----------------|------|------|------|------|------|------|---|
| | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | |
| Grade 4 | | | | | | | | |
| Advanced | | | | 19% | 22% | 23% | 18% | -0.4 |
| Proficient and Above | | | | 79% | 80% | 80% | 78% | -0.5 |
| Basic and Above | | | | 95% | 96% | 95% | 95% | -0.2 |
| Grade 8 | | | | | | | | |
| Advanced | | | | 18% | 19% | 23% | 27% | 2.9 |
| Proficient and Above | | | | 65% | 67% | 67% | 70% | 1.7 |
| Basic and Above | | | | 91% | 92% | 91% | 92% | 0.2 |
| Grade 11 | | | | | | | | |
| Advanced | | | | 20% | 21% | 20% | 17% | -1.0 |
| Proficient and Above | | | | 55% | 57% | 57% | 56% | 0.2 |
| Basic and Above | | | | 86% | 88% | 89% | 87% | 0.1 |

Table reads: The percentage of 4th graders who scored at the advanced level on their state math test decreased from 19% in 2005 to 18% in 2008. During this period, the average yearly loss in the percentage advanced was 0.4 percentage points per year in grade 4 math.

¹Averages are subject to rounding error.

Overall Achievement — Effect Sizes

How to read figures 5 and 6 and tables 5 and 6

An **effect size** is a statistical tool that conveys the amount of difference between test results using a common unit of measurement which does not depend on the scoring scale for a particular test. An effect size is computed by subtracting the **mean scale score** (the average score) on a test for one year, such as 2006, from the mean scale score for another year, such as 2007, then dividing the result by the average standard deviation. (The **standard deviation** is a measure of how much test scores tend to deviate from the mean—in other words, how spread out or bunched together scores are.) If the mean score has not changed, then the effect size is 0. An effect size of +1 indicates an increase of 1 standard deviation from the previous year's mean score. Effect sizes can also be used to calculate differences in scores between two subgroups of students.

Tables 5 and 6 show mean scale scores, standard deviations, and the **accumulated annual effect size** (AAES), which is the cumulative gain in effect size over a range of years. For example, to determine the accumulated annual effect size between 2006 and 2008, one would calculate the change in effect size from 2006 to 2007, and from 2007 to 2008, then add the results together. In figures and tables 5 and 6, 2002 (or the closest year with comparable data) was used as a starting point (0.00) to calculate accumulated annual effect sizes after NCLB was enacted (and before, if available). Steady gains in AAES are represented by negative numbers before 2002 rising to positive numbers after 2002, so that pre- and post-NCLB trends can be shown on the same trend line. A positive AAES before 2002 or a negative AAES after 2002 indicates a decline in performance over time.

Figure ND-5. Reading Achievement Trends in Terms of Effect Sizes

Table ND-5. Reading Achievement Trends in Terms of Effect Sizes

| Grade Level | Reporting Year | | | | | | | | | Pre-NCLB Average Yearly Effect Size Gain 1999-2002 ¹ | Post-NCLB Average Yearly Effect Size Gain 2002-2008 ¹ | |
|-------------|----------------|------|------|------|------|------|--------------|--------------|--------------|---|--|-------|
| | 1999 | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | | | |
| Grade 4 | MSS (SD) | | | | | | 647.9 (27.8) | 649.5 (29.3) | 652.7 (31.6) | 647.9 (29.4) | | |
| | AAES | | | | | | 0.00 | 0.06 | 0.16 | 0.01 | NA | 0.00 |
| Grade 8 | MSS (SD) | | | | | | 685.3 (28.6) | 684.7 (28.3) | 687.6 (29.6) | 685.7 (31.0) | | |
| | AAES | | | | | | 0.00 | -0.02 | 0.08 | 0.02 | NA | 0.01 |
| Grade 11 | MSS (SD) | | | | | | 712.8 (28.5) | 712.9 (25.2) | 714.2 (29.5) | 707.7 (28.4) | | |
| | AAES | | | | | | 0.00 | 0.00 | 0.05 | -0.17 | NA | -0.06 |

Table reads: The mean scale score (MSS) of 4th graders on the state reading test remained stable at 647.9 from 2005 to 2008. The standard deviation (SD) for the mean scale score in 2005 was 27.8. Using 2005 as a starting point (0.00), the accumulated annual effect size (AAES) for grade 4 reading totaled 0.01 by 2008. For the post-NCLB period, the average yearly gain in effect size at grade 4 was 0.00.

Note: The scoring scale varies for different grade levels within a range of 470-870.

¹Averages are subject to rounding error.

Figure ND-6. Mathematics Achievement Trends in Terms of Effect Sizes

Table ND-6. Mathematics Achievement Trends in Terms of Effect Sizes

| Grade Level | Reporting Year | | | | | | | | | Pre-NCLB Average Yearly Effect Size Gain 1999-2002 ¹ | Post-NCLB Average Yearly Effect Size Gain 2002-2008 ¹ | |
|-------------|----------------|------|------|------|------|------|-----------------|-----------------|-----------------|---|--|-------|
| | 1999 | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | | | |
| Grade 4 | MSS (SD) | | | | | | 633.4 (31.5) | 634.1 (30.9) | 635.4 (33.4) | 629.5 (30.5) | | |
| | AAES | | | | | | 0.00 | 0.02 | 0.06 | -0.12 | NA | -0.04 |
| Grade 8 | MSS (SD) | | | | | | 697.7 (34.0) | 698.7 (34.1) | 698.7 (35.6) | 702.6 (36.6) | | |
| | AAES | | | | | | 0.00 | 0.03 | 0.03 | 0.14 | NA | 0.05 |
| Grade 11 | MSS (SD) | | | | | | 740.7 (40.3) | 743.9 (39.7) | 744 (38.9) | 740.9 (38.6) | | |
| | AAES | | | | | | 0.00 | 0.08 | 0.08 | 0.00 | NA | 0.00 |

Table reads: The mean scale score (MSS) of 4th graders on the state math test decreased from 633.4 in 2005 to 629.5 in 2008. The standard deviation (SD) for the mean scale score in 2005 was 31.5. Using 2005 as a starting point (0.00), the accumulated annual effect size (AAES) for grade 4 math totaled -0.12 by 2008. For the post-NCLB period, the average yearly gain in effect size at grade 4 was -0.04.

Note: The scoring scale varies for different grade levels within a range of 470-870.

¹Averages are subject to rounding error.

Key Terms

Percentage proficient (and above) — The percentage of students in a group who score at and above the cut score for “proficient” performance on the state test used to determine progress under NCLB. The Act requires states to report student test performance in terms of at least three achievement levels: basic, proficient, and advanced. Adequate yearly progress determinations are based on the percentage of students scoring at the proficient level and above.

Percentage basic (and above) — The percentage of students in a group who score at and above the cut score for “basic” performance on the state test used to determine progress under NCLB.

Percentage advanced — The percentage of students in a group who reach or exceed the cut score for “advanced” performance on the state test used to determine progress under NCLB.

Moderate-to-large gain — For the percentage basic, proficient, or advanced, an average gain of 1 or more percentage points per year. For effect size, an average gain of 0.02 or greater per year.

Slight gain — For the percentage basic, proficient, or advanced, an average gain of less than 1 percentage point per year. For effect size, an average gain of less than 0.02 per year.

Moderate-to-large decline — For the percentage basic, proficient, or advanced, an average decline of 1 or more percentage points per year. For effect size, an average decline of 0.02 or greater per year.

Slight decline — For the percentage basic, proficient, or advanced, an average decline of less than 1 percentage points per year. For effect size, an average decline of less than 0.02 per year.

Effect size — A statistical tool that conveys the amount of difference between test results using a common unit of measurement which does not depend on the scoring scale for a particular test.

Accumulated annual effect size — The cumulative gain in effect size over a range of years.

Mean scale score — The arithmetical average of a group of test scores, expressed on a common scale for a particular state’s test. The mean is calculated by adding the scores and dividing the sum by the number of scores.

Standard deviation — A measure of how much test scores tend to deviate from the mean—in other words, how spread out or bunched together test scores are. If students’ scores are bunched together, with many scores close to the mean, then the standard deviation will be small. If scores are spread out, with many students scoring at the high or low ends of the scale, then the standard deviation will be large.

Cautions and Explanations

Different labels for achievement levels — For consistency, all of the state profiles developed for this report use a common set of labels (basic, proficient, and advanced) for the main achievement levels required by NCLB. In practice, however, some states may use different labels, such as “meets standard” instead of proficient, and some states have established additional achievement levels beyond those required by NCLB.

Different names for subgroups — For the sake of consistency and ease of data tabulation, all of the state profiles developed for this report use a common set of names for the major student subgroups. In practice, however, states use various names for subgroups that may differ from those used here (such as using “Hispanic” instead of “Latino,” or “special education students” instead of “students with disabilities”). Moreover, a few states separately track the performance of subgroups not included in the analyses for this report.

Special caution for students with disabilities and English language learners — Trends for students with disabilities and English language learners should be interpreted with caution because changes in federal guidance and state accountability plans may have altered which students in these subgroups are tested for accountability purposes, how they are tested, and when their test scores are counted as proficient under NCLB. These factors could affect the year-to-year comparability of test results.

Inclusion of former English language learners — In many states, the subgroup of English language learners (also known as limited English proficient students) includes students who were formerly English language learners but who have achieved English language proficiency or fluency in the last two years. Federal NCLB regulations permit states to include these formerly ELL students (sometimes referred to as “redesignated fluent English proficient” students) in the ELL subgroup for up to two years for purposes of NCLB accountability.

Limitations of percentage proficient measure — The percentage proficient, the main gauge of student performance under NCLB, can be easily understood and gives a snapshot of how many students have met their state’s performance expectations. But it also has several limitations as a measure of student achievement. Users of percentage proficient data should keep in mind these limitations, particularly the following:

- * “Proficient” means different things across different states. States vary widely in curriculum, learning expectations, and tests, and state tests differ considerably in their difficulty and cut scores for proficient performance.
- * Although this study has taken steps to avoid comparing test data where there have been “breaks” in comparability resulting from new tests, changes in content standards, revised cut scores, or other major changes in testing programs, the year-to-year comparability of test results in the same state may still be affected by less obvious policy and demographic changes.
- * Changes in student performance may occur that are not reflected in percentage proficient data, such as an increase in the number of students reaching performance levels below and above proficient (such as the basic or advanced levels).
- * The size of the achievement gaps between various subgroups depends in part on where a state sets its cut score for proficiency. For example, if a proficiency cut score is set so high that almost nobody reaches it or so low that almost everyone reaches it, there will be little apparent achievement gap. By contrast, if the cut score is closer to the mean test score, the gaps between subgroups will be more apparent.

Difficulty of attributing causes — Although the tables above show trends in test scores since the enactment of NCLB, one cannot assume that these trends have occurred *because of* NCLB. It is always difficult to determine a cause-and-effect relationship between test score trends and any specific education policy or program due to the many federal, state, and local reforms undertaken in recent years and due to the lack of an appropriate “control” group of students not affected by NCLB.
